### Company Description

---

We are a leading AgTech business that operates throughout selected international markets as part of a global group of Agri Technovation (AT) companies. As a fast-growing business, we are looking to expand our team with suitably qualified and experienced candidate/s looking for an opportunity to become part of our company and all it has to offer.

Science-based plant and soil health and nutrition is at the root of everything we do. Through our dynamic service offering (precision services, products and the use of our cloud-based data platform that supports informed decision making), we assist producers to increase their crop yields while reducing production costs. Our clients enjoy the benefit of one centralised access point for services, products and high-tech support. We also offer unique services to our clients, including MYSOIL CLASSIFICATION™, ITEST™ CARBOHYDRATES (first of its kind commercially available) and PICKLOGGER™, which offerings set us apart from our competitors.

A highly experienced leadership team drives the business with an acute ability to guide, inspire and lead all team members, ensuring strong focus on our mission - to create the most valuable synergy between crop performance and technology to all farmers.

We are immensely proud of what we have achieved so far and look forward to what's to come – new challenges, new solutions, more innovation.

## Job Description

---

The Senior Process Engineer position is a permanent position based in Wellington. This position will form part of the Process Engineering team supporting process engineering and production by adapting and applying lean production and process engineering practices and techniques.

### Main Responsibilities

- Drive continuous improvement of efficiency & performance, including optimising the plant layout to improve production flow.
- Review current systems and procedures and recommend best practices.
- Develop monthly progress reports and provide feedback to the HOD.
- Troubleshoot on-site problems with production processes.
- Adhere to and continuously update procedures and standards.
- Process control, including monitoring the products processed and reporting variances.
- Provide input on production related capital projects.
- Ensure that all scheduled maintenance jobs are conducted and adhered to.
- Ensure safe working practices.

### Skills and Capabilities

- Excellent work ethic
- Strong problem-solving capabilities
- Strong analytical skills
- Ability to maintain high standards under pressure
- Strong attention to detail
- Ability to make timely decisions

### Minimum Requirements

#### Qualifications

- Relevant tertiary qualification in BEng or BSc Eng (Chemical/Process Engineering).
- Fully bilingual (Afrikaans and English).
- High proficiency in Microsoft Suite (Word, Excel, PowerPoint).
- Excellent interpersonal skills.
- Good understanding of production and process engineering processes, procedures, and systems.

#### Experience

- Minimum of 5 – 10 years of experience as Chemical/Process Engineer in a production environment.
- Experience in the agricultural industry would be advantageous.
